AmaInspector™

AmaInspector™ is a visual tool that analyzes and translates the contents of industry standard AMA files. Variations in file blocking and record formats from multiple switch manufacturers and polling systems are identified and corrupt data is detected. AmaInspector™ shortens the learning curve for technicians. It simplifies call data research and analysis and allows you to quickly highlight problem areas and non-standard AMA.

AmaInspector™ allows you to verify switch translation changes, inspect AMA recordings, check traffic volumes, or locate specific calls for law enforcement or testing without waiting for downstream batch processes to complete. It is easy to troubleshoot and verify proper AMA translation in software.

AmaInspector™ Pricing

Single User License: \$695
Terminal Services: \$2500 for up to 5 concurrent users.
\$2000 for each additional increment of 5 users

Annual maintenance is 15 % of the cost of the license fee. The maintenance fee includes telephone support and free software upgrades for maintenance items and enhancements.

AmaDirector™

AmaDirector™ features a high performance engine that reads and processes raw AMA BAF formatted records into an easy to understand and use intermediate format that makes it extremely easy to filter, sort, and aggregate (combine) data from multiple switch sources, and provides the data for analysis. The filtering feature provides a very versatile method to filter on multiple fields without having to know complex query statements. AmaDirector has the unique ability to export the aggregated and filtered data as a csv file or as an actual BAF AMA file with choices of several blocking formats.

AmaDirector™ Pricing

Single User License: \$1,600

Annual maintenance is 15 % of the cost of the license fee. The maintenance fee includes telephone support and free software upgrades for maintenance items and enhancements.

AmaInspector™ and AmaDirector™ are Microsoft Windows based products that are based on Microsoft .NET technology (no unmanaged code) and are fully compatible with both 32 and 64 bit architectures. For more information, visit our website at www.firesteeltechnologies.com
